

INTEGRATED SHOOTBACK® CANNON

"The most effective training for cover and concealment."

Increase the Realism in Your Training by Shooting Back

The patented Integrated ShootBack® Cannon seamlessly integrates "hostile gun fire" from the on-screen threat. The ShootBack is synchronized with Judgment Trainer situations to auto-track and fire a .68 caliber nylon ball from the cannon mounted above the screen. When the suspect on the screen fires, the ShootBack Cannon fires an accurate single, three-round burst, or fully automatic "hostile fire" at the trainee. It's proven to be one of the most immediate and effective training tools. The ShootBack joystick is also included to allow direct instructor control over the cannon.

Key Features

- ShootBack is designed to respond and react seamlessly with situations
- Targeting laser and camera allow instructors to safely aim the cannon
- High-speed tracking provides easy operation
- Press *Scenario Enable* on the joystick to synchronize cannon to fire in conjunction with shots fired by the training situation
- Unit is self-contained (5.5" high, 24" wide and 12.75" deep) and does not require a separate air compressor
- Fires in single shot, three-round bursts or fully automatic (approximately 7 shots per second)
- .68 caliber nylon ball projectiles
- Available as a standalone unit for use with any brand of simulator
- Effective for close quarter battle, shoot houses and multi-room configurations

ShootBack® Cannon

ShootBack Unit Includes

- Cannon, electronics, air compressor, ammunition feed unit, video camera and laser sight
- Floor or wall mounting brackets
- Monitor to display video of the training area as recorded by the cannon-mounted camera
- Software to integrate movement and synchronization
- Joystick to control the cannon movement

AIRMUNITION®

9MM RECOILROUND AIRCARTRIDGE

"The most realistic firearm simulation available."

Realistic Recoil

The 9mm RecoilRound Aircartridge provides realistic cycle of operation and recoil of semi- and fully automatic firearms. The RecoilRound is a patented high-tech training alternative to pyrotechnic ammunition, using compressed air at 2900 - 3500 psi as its propellant. With the RecoilRound system the chamber is shortened so a conventional, lethal round cannot be fully chambered.

Key Features

- The RecoilRound is the most realistic way to simulate firearm recoil and cycle of operation during simulation
- Firearm ejects the simulated round to provide increased realism
- Basic hands-on training in safe weapon handling
- Requires changing of magazine after existing rounds are spent
- The internal components of the RecoilRound Aircartridge are factory guaranteed for a minimum of 500 shots
- Realistic and cost effective
- Sight disruption comparable to live fire
- Aircartridge technology is clean and reliable
- Dedication kits with special barrels for most calibers of semi- and fully automatic firearms

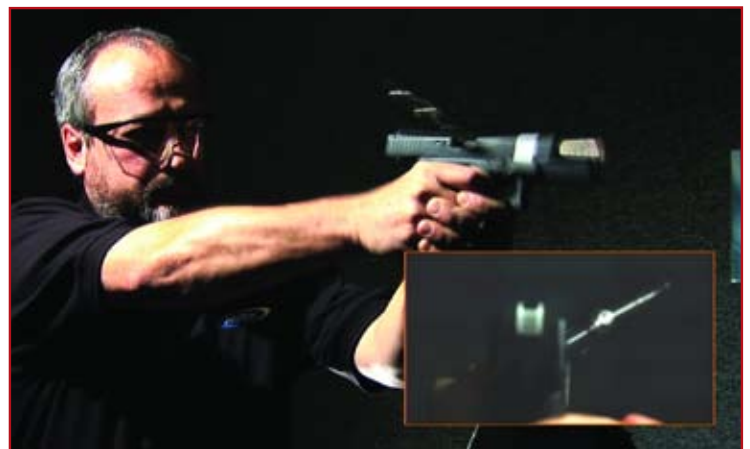

RecoilRound Aircartridges

Available Recoil Kits

- **Sig** - 226, 228
- **Glock** - 17/22, 19/23
- **Smith & Wesson** - 5906 STW
- **Heckler & Koch** - USP 9 & 40
- **Beretta** - 92 & 96
- **AR 15 Family** - SMG, M4, AR-15/M1, M203
- **Heckler & Koch/SWA5** - MP5 & SWA5

Modified (Non-Tethered) Firearms

RecoilRound with close-up of disruption of sight
